(57) **ABSTRACT**

The present application discloses a display panel and a mobile terminal. The display panel includes a display functional body, a color filter layer, and an ultraviolet absorbing layer. The ultraviolet absorbing layer is disposed on a side of the color filter layer away from the display functional body. The ultraviolet absorbing layer includes a network crosslinking structure and an ultraviolet absorber dispersed within the network crosslinking structure. This solution may reduce influence of ultraviolet rays on organic light emitting layers, and effectively prolong the service life of the display panel.
