(57) **ABSTRACT**

A magnet assembly for a mobile terminal according to an embodiment includes a base member incorporated into the mobile terminal, and a magnetic member provided on one surface of the base member and including at least one slit formed therein. A wireless charging device for a mobile terminal is capable of being coupled to the magnet assembly by a magnetic force, and the wireless charging device includes a charging module which generates an induced current for charging the mobile terminal, and is coupled to the magnetic member by the magnetic force.
