(57) **ABSTRACT**

A control system includes a scheme generation module and a control unit communicatively coupled to the scheme generation module. The scheme generation module generates a control scheme according to an optical image of an illuminated object. Upon execution of the control scheme, the control unit controls the status of the light fixture according to the content of the control scheme, such that the status of the light fixture matches the status of the illuminated object, thereby facilitating improvement of the display effect of the illustrated object.
