(57) **ABSTRACT**

A method is implemented by a wireless power system. The wireless power system includes wireless power transmitters and wireless power receivers. The method includes receiving, by the wireless power transmitters, beacon signals transmitted from wireless power receivers. The method includes synchronizing, by the wireless power transmitters, a transmission of high power signals. The method includes transmitting, by the wireless power transmitters, the high power signals as synchronized to the wireless power receivers. Each transmitter of the plurality of wireless power transmitters individually transmits a corresponding signal of the plurality of high power signals.
