(57) **ABSTRACT**

A display panel is provided, including: a pixel defining layer including a first opening in a first display area and a second opening in a second display area; first repeating units in the first display area, each first repeating unit including at least a first sub-pixel; second repeating units in the second display area, each second repeating unit including at least a second sub-pixel, a color of light emitted by which is the same as that of light emitted by the first sub-pixel. A distribution density of the first repeating units is greater than that of the second repeating units. The first sub-pixel includes the first opening, the second sub-pixel includes the second opening, and an area of an orthographic projection of the second opening on the base substrate is greater than that of an orthographic projection of the first opening on the base substrate.
