(57) **ABSTRACT**

A display device includes a display panel configured to include a first display area in which a plurality of first pixels are disposed, and a second display area in which a plurality of second pixels and a light-transmission area between the second pixels are disposed; and a sensor disposed corresponding to the second display area, wherein the second pixel includes a plurality of sub-pixels, the plurality of sub-pixels include a red sub-pixel including a red organic compound layer disposed between a first anode electrode and a first cathode electrode, a green sub-pixel including a green organic compound layer disposed between a second anode electrode and a second cathode electrode, and a blue sub-pixel including a blue organic compound layer disposed between a third anode electrode and a third cathode electrode, and a thickness of the green organic compound layer is larger than thicknesses of the red organic compound layer and the blue organic compound layer.
