(57) **ABSTRACT**

The invention relates to a method for installing coil groups in an electric machine (**100**), each coil group (**104**, **204**) comprising at least one coil, each coil being composed of a plurality of turns of conductors, characterized in that it comprises, for each coil group (**104**, **204**), the following installation steps applied to each coil group before being applied to the following coil group: a step of inserting a first coil group into at least two free or partially occupied slots (**106**) of the electric machine (**100**), the coil portions arranged outside the slots forming the coil heads, a definitive shaping step by compacting the heads of the coils of said coil group into a predetermined shape, by a preconfigured apparatus.
