(57) **ABSTRACT**

The present disclosure describes strand mounts for small cell radios. The strand mount includes a frame including opposing frame sections, each frame section is configured such that one or more radios and/or antennas can be mounted to an outer surface of the respective frame section and extend outwardly therefrom, an extension member coupled to an end of the frame and configured such that one or more radios and/or antennas can be mounted thereto, the extension member being configured to rotate to a desired angle relative to the frame to achieve a desired azimuth, and one or more mounting clamps coupled to the frame, the one or more mounting clamps being configured to secure the strand mount on a cable strand. Alternative strand mounts and strand mount assemblies are also described.
