Related U.S. Application Data

(63) Continuation of application No. 16/990,328, filed on Aug. 11, 2020, now Pat. No. 11,949,689.
(60) Provisional application No. 62/886,247, filed on Aug. 13, 2019.

An identity disambiguation data is received via a communication interface. A distributed identity disambiguation repository is used to determine whether the identity disambiguation data has been used previously to establish a digital identity. In response to a determination made using the distributed identity disambiguation repository that the identity disambiguation data has not been used previously to establish a digital identity a globally-unique digital identity is issued based at least in part on the identity disambiguation data. The identity disambiguation data comprises data that is unique to one human user.
