A fast assembly display screen, comprising: a panel, a front frame, and a plurality of thumb screws. The panel is provided with two opposite side edges, on a front end and rear end of each side edge are disposed a connection base respectively, and each connection base is provided with a female screw thread. The front frame is provided with a hollow area, for the panel to be pressed vertically downward to fasten and fix the front frame into the hollow area, to realize assembly of the panel and the front frame. A plurality of support slots are disposed on two opposite frame edges of the front frame, each of the support slots is aligned to the female screw thread of the corresponding connection base, so that in assembling the panel and the front frame, each support slot surrounds the female screw thread of the corresponding connection base. Each of the plurality of thumb screws can be screwed in through the support slot, to be locked onto the female screw thread of the corresponding connection base by a user's hand.
