ABSTRACT

The present disclosure provides a display panel, a manufacturing method thereof, and a display apparatus. The display panel includes a display area, provided with at least one to-be-dug area; and an annular isolation area, surrounding the to-be-dug area, and arranged between the to-be-dug area and the display area surrounding the to-be-dug area, the annular isolation area includes a first annular blocking dam surrounding the to-be-dug area. The display panel includes: a base substrate, an electroluminescent layer, an encapsulation layer and a filling layer. An orthographic projection of the filling layer on the base substrate is within a range of orthographic projections of the to-be-dug area and the annular isolation area on the base substrate.
