(60) Provisional application No. 63/435,737, filed on Dec. 28, 2022.

A mobile power station includes a frame having a handle and a base coupled to the frame. The base includes battery cells disposed therein. A first module is couplable to the base forming a first-base interface. The first module receives power from the battery cells through the first-base interface. A second module is couplable to the first module forming a second-first interface. The second module receives power from the battery cells through the second-first interface.
