(57) **ABSTRACT**

Display panels and display devices are provided. The display panel includes a substrate, a driving circuit layer including a circuit unit disposed in a non-display area, a first organic layer including a first covering part and a retaining wall part arranged at intervals, a waterproof layer, and a sealant disposed in the non-display area. The first covering part extends to the non-display area. The waterproof layer covers the retaining wall part. The sealant is disposed on sides of the driving circuit layer and the waterproof layer away from the substrate. An orthographic projection of the sealant on the substrate overlaps with an orthographic projection of the retaining wall part on the substrate, and an orthographic projection of an end of the circuit unit away from a display area on the substrate is located within the orthographic projection of the retaining wall part on the substrate.
