A communication control apparatus includes a generation unit, a receiving unit, a first sending unit configured to cause a first image packet received by the receiving unit to be sent by a first communication interface included in a plurality of communication interfaces, a second sending unit configured to cause a second image packet generated by the generation unit to be sent by the first communication interface at timing that is based on reception of predetermined information included in the first image packet, and a control unit configured to, in a case where the first communication interface has become unable to perform sending during sending of the first image packet or the second image packet from the first communication interface, cause a communication packet including at least the predetermined information to be sent by a second communication interface included in the plurality of communication interfaces.
