§ 371 (c)(1),

(2) Date: **Nov. 11, 2021**

A display panel and a display device are provided in the present application. The display panel includes a substrate, a pixel drive circuit layer, a first flat layer, a first conductive layer, a second flat layer, a first electrode, a metal contact layer, a light-emitting layer, and a second electrode. The present application designs a gap provided between an edge of the metal contact layer located in a non-display area and an edge of the second flat layer, whereby water vapor within the second flat layer can be released outwardly in a longitudinal direction, reducing an occurrence probability of a red border line.
