(57) **ABSTRACT**

An electronic device is provided. The electronic device includes a first housing, a second housing slidably coupled to the first housing in a first direction, a flexible display of which at least a part is drawn into or taken out of an accommodation space of the electronic device according to sliding of the second housing, a support member sliding by means of the sliding of the second housing and supports the flexible display, and a link structure connecting the first housing, the second housing, and the support member where sliding of the second housing and sliding of the support member are interlinked. The link structure includes a link member, a first connection part for connecting the link member to the support member, a second connection part connecting the link member to the first housing, and a third connection part slidably or rotatably connecting the link member to the second housing.
