(57) **ABSTRACT**

A lamp for heating is composed of a heat dissipation substrate made of metal, an insulating layer disposed on the heat dissipation substrate, a plurality of wiring patterns disposed on the insulating layer, a plurality of light source elements disposed on the plurality of wiring patterns on a one-to-one basis, a joining material electrically joining each of the plurality of wiring patterns and each of the plurality of light source elements, and a metal wiring electrically connecting each adjacent pair of the plurality of light source elements.
