ABSTRACT

A display panel and a display apparatus are provided in the present disclosure. The display panel includes a display region, a first optical device region, a first non-display region and a second non-display region; and further includes at least one first signal line and at least one first connection line. In the display region, a first signal line extends along a first direction and ends at the first optical device region; a first connection line includes a first line segment and a second line segment which are electrically connected to each other; the first line segment is electrically connected to a first signal line on a first side of the first optical device region along the first direction; and the second line segment is electrically connected to a first signal line on a second side of the first optical device region along the first direction.
