A server chassis includes at least one first tray, at least one second tray, a housing, a first interface, the housing includes a bottom wall and a side wall, the bottom wall and the side wall surrounds and forms a receiving cavity with an opening. The first interface is located in the receiving cavity; the first interface is placed at a corner of the bottom wall close to the opening and the side wall. The first tray and the second tray are stacked in the receiving cavity, and the first tray is located below the second tray. The first tray slides out or retracts the receiving cavity through the opening. The second tray slides out or retracts the receiving cavity through the opening; the first tray and the second tray are configured to carry hard disks of a plurality of arrays. The present disclosure also provides a server.
