ABSTRACT

A light emitting unit includes: a substrate; a light source disposed on the substrate and having a light emitting surface; and a lens unit including: a lens disposed above the light source, and an optical member fixed to the lens and disposed between the light source and the lens, the optical member including: a first region facing the light emitting surface, and a second region provided around the first region. A light transmittance of the first region is higher than a light transmittance of the second region. The lens unit is not fixed to the substrate.
