**ABSTRACT**

An electrical outlet power bank system for receiving electricity from a power bank includes a power grid being a source of electricity. An electric meter is electrically coupled to the power grid. A circuit breaker is electrically coupled to the electric meter and is actuated to open or close a flow of electricity from the power grid. An electrical outlet is electrically coupled to the circuit breaker and receives an electrical plug. A power bank is electrically coupled to the electrical outlet and to the circuit breaker and receives and stores electricity from the power grid, wherein the power bank is actuated to provide electricity to the electrical outlet when the circuit breaker closes the flow of electricity from the power grid.
