**ABSTRACT**

A display panel and a manufacturing method thereof, and a display apparatus. In a first aspect, a display panel includes: a drive substrate; a pixel definition layer located on a side of the drive substrate, the pixel definition layer including a plurality of openings; a conductive layer located on a side of the pixel definition layer away from the drive substrate, the conductive layer including a plurality of conductive unit groups, the conductive unit group including at least two conductive units arranged spaced; a plurality of light-emitting devices, each of the light-emitting devices including a first electrode, a light-emitting functional layer and a second electrode sequentially stacked, the second electrode contacting with the conductive unit.
