(57) **ABSTRACT**

A method for securing communication between at least two participants, each having an identification and a safeguard and communicate therewith, in encrypted form involves the participants exchanging their identification. At least one of the participants communicates its position in addition to its identification to the other participant. The position of the participant being determined or queried by the other participant without any assistance on the part of the participant, the participant then validating the other participant based on a comparison of the communicated position and the determined or queried position.
