(22)	PCT Filed: May 2, 2022	The disclosure relates to a 5G or 6G communication system for supporting a higher data transmission rate. A method executed by a first node in a wireless communication system is provided. The method may include: establishing a bearer for transmitting a first message; and receiving, from a second node, related information about transmission of the first message. The first message is sent by a user equipment (UE) in an idle mode or an inactive state to the second node via the bearer.
