An organic light-emitting diode including: a first electrode;
a second electrode facing the first electrode; and an organic
layer disposed between the first electrode and the second
electrode. The organic layer includes a light-emissive layer
that includes a dopant material including an organometallic
compound represented by Chemical Formula 1, and a host
material including a mixture including a compound repre-
sented by Chemical Formula 2 and a compound represented
by Chemical Formula 3. The organic light-emitting diode
may have excellent or desirable light-emitting efficiency and
lifespan.
