(57) **ABSTRACT**

A radiation irradiation device includes a device main body that is provided with an irradiation window for emitting radiation; a remote operation unit that is capable of remotely operating the device main body and of which an outer peripheral surface is composed of a plurality of surfaces; and an accommodation portion that is provided in the device main body, accommodates the remote operation unit in a form of being embedded in a main body outer peripheral surface, which is an outer peripheral surface of the device main body, and has a recessed inner wall surface facing an entire surface excluding one surface in the outer peripheral surface of the remote operation unit.
