§ 371 (c)(1),

(2) Date: **Dec. 2, 2022**(57) **ABSTRACT**

There is provided an apparatus, said apparatus comprising at least one processor and at least one memory including a computer program code, the at least one memory and computer program code configured to, with the at least one processor, cause the apparatus at least to: at a user equipment, the user equipment having a first universal subscriber identity module, USIM, associated with a first network and at least one second USIM associated with a second network, provide an indication from the at least one second USIM to the second network that paging notifications for the second network are to be provided to the first USIM of the user equipment via the first network, receive a paging notification for the second network at the first USIM of the user equipment via the first network and provide the paging notification from the first USIM to the second USIM in the user equipment.

Related U.S. Application Data

(60) Provisional application No. 63/034,115, filed on Jun. 3, 2020.

S1

At a user equipment, the user equipment having a first USIM associated with a first network and at least one second USIM associated with a second network, providing an indication from the at least one second USIM to the second network that paging notifications for the second network are to be provided to the first USIM of the user equipment via the first network

S2

Receiving a paging notification for the second network at the first USIM of the user equipment via the first network

S3

Providing the paging notification from the first USIM to the second USIM in the user equipment
