(57) **ABSTRACT**

A power control system includes electronic component mounting apparatuses; power control modules configured to control power of the electronic component mounting apparatuses; a power controller configured to turn on and off the power of the electronic component mounting apparatuses by controlling the power control modules, or receive signals from the power control modules indicating power on and off states of the electronic component mounting apparatuses; and a remote control module that is remote from the electronic component mounting apparatuses and is configured to control the power of electronic component mounting apparatuses by controlling the power controller via a wired or wireless connection.
