ABSTRACT

A powered water bottle is provided. The powered water bottle includes a bottle portion and a powered base located below the bottle portion. The powered base includes a power source and an output, wherein the output is configured to couple the powered base to an external device to supply power to the external device. In other embodiments, a powered water bottle sleeve is provided. The powered sleeve includes a water bottle portion and a powered base coupled on a bottom of the water bottle portion. The powered base comprises a power source and an output, wherein the output is configured to couple the powered base to an external device to supply power to the external device.
