(57) ABSTRACT

An electronic device includes a substrate having a top surface, a first side surface and a second side surface respectively connecting the top surface, a first signal line and a second signal line disposed on the top surface, a first conductive pattern disposed on the first side surface and electrically connected to the first signal line, and a second conductive pattern disposed on the second side surface and electrically connected to the second signal line. The first signal line and the second line are configured to transmit different kinds of signals, and the first conductive pattern and the second conductive pattern are different in width.
