(57) **ABSTRACT**
A signal analysis protocol changing method for a wireless lamp comprises: Step 1: presetting a plurality of analysis protocols in the wireless lamp, wherein the analysis protocols are in one-to-one correspondence with control signals sent by different manufacturers; Step 2: presetting a plurality of change signals in an encoder, wherein the change signals are used to activate the corresponding preset analysis protocols in the wireless lamp; Step 3: establishing a communication connection between the encoder and the wireless lamp; Step 4: transmitting a change signal to the wireless lamp by the encoder; Step 5: receiving and analysing the change signal by the wireless lamp; Step 6: activating the corresponding analysis protocol according to an analysis result by the wireless lamp; and Step 7: disconnecting the communication between the wireless lamp and the encoder.
