(57) **ABSTRACT**

Provided is an electronic device. The electronic device may comprise: a housing comprising a first housing and a second housing configured to rotate relative to the first housing; a display comprising a first display area disposed on the first housing, a second display area disposed on the second housing, and a folding area disposed between the first display area and the second display area; and a display support member comprising a composite material and supporting the display. The display support member may comprise a pattern structure facing the folding area. The pattern structure may comprise a wing part and a support part extending from the wing part.
