(57) **ABSTRACT**

Embodiments of the present disclosure relate to methods, devices, and medium for communication. A method of communication comprises in accordance with a determination that a condition for performing a configuration for a primary secondary cell (PScell) of a secondary cell group (SCG) of a second network device is met, determining, at a terminal device served by a first network device, whether the SCG of the second network device is deactivated. The method further comprises in accordance with a determination that the SCG is deactivated, transmitting a third message to the second network device of the SCG, the third message indicating that the configuration for the PScell has been completed by the terminal device.
