(57) **ABSTRACT**

The present invention relates to a method of performing data transmission in a wireless communication system. Especially, the method includes the steps of transmitting data on a first bandwidth part (BWP) among a plurality of BWPs configured for data transmission in a radio resource control (RRC) inactive state (RRC_INACTIVE); switching from the first BWP to a second BWP among the plurality of BWPs, when a positive response message of the data is not received from the network within a pre-defined period; and transmitting the data on the second BWP.
