ABSTRACT

A compound having a structure of Formula I,

is provided. In Formula I, M is Pt or Pd; rings A, B, C, and D are 5-membered or 6-membered rings; one of Z¹, Z², and Z³ is N and the other two are C; each of X¹ to X¹⁰ is C or N; K is a direct bond, O, S, N(R^α), P(R^α), B(R^α), C(R^α)(R^β), or Si(R^α)(R^β); each of L¹ and L² is a direct bond or a linker; each R, R', R'', R^α, R^β, R^A, R^B, R^C, R^D, and R^E is hydrogen or a General Substituent; R¹ is a substituent; at least one R^E comprises a substituent selected from the group consisting of aryl, heteroaryl, cycloalkyl, and heteroalkyl; any two substituents may be joined or fused to form a ring, except that R^E at X³ or X⁴ cannot be joined with R^A to form a ring. Formulations, OLEDs, and consumer products including the compound are also provided.
