(57) **ABSTRACT**

The invention discloses a movable locking ear and an electrical device. The electrical device comprises a frame and a movable locking ear. The frame comprises a first recess, a second recess opposite to the first recess, and a side wall between the first recess and the second recess. The movable locking ear comprises a first fastening member for fastening the first recess, a second fastening member opposite to the first fastening member for fastening the second recess, and a resisting member between the first fastening member and the second fastening member. A position of a bending end of the resisting member is near or far from the side wall depending on a distance between the first fastening member and the second fastening member.
