**ABSTRACT**

In a display device, a main area and a bend area adjacent to the main area are located in a display area. A first subpixel is located in the bend area. A planarization layer includes a first concave portion located in the first subpixel and a first slope portion located outside the first concave portion. The first slope portion is located so that light emitted by an emitting layer is reflected in a front viewing angle direction by a first electrode. In this manner, luminance in the side viewing angle direction of the bending area is improved.
