(57) **ABSTRACT**
A display module and a display device. The display module includes: a flexible display panel (61), wherein the flexible display panel (61) includes an active area (AA) and a bending area (BB) located at a periphery of the active area (AA); a supporting layer (62) disposed on one side of the active area (AA), and the supporting layer (62) is disposed away from a light-emitting side of the flexible display panel (61); wherein, the supporting layer (62) is provided with an isolation groove (63) extending through the supporting layer (62) in a first direction, and the isolation groove (63) is disposed close to the bending area (BB) for isolating the supporting layer (62) on both sides of the isolation groove (63), and the first direction is perpendicular to a thickness direction of the supporting layer (62) and a bending axis (X) of the bending area (BB).
