ABSTRACT

A display apparatus is disclosed that includes a substrate, a display element layer a color filter layer, an input-sensing layer, and a reflection-adjusting layer disposed between the display element layer and the color filter layer, or between the color filter layer and the input-sensing layer. The color filter layer includes a first color filter and a second color filter. The first color filter is arranged in a first emission area and the second color filter is arranged in a second emission area. The reflection-adjusting layer is integrally formed over the first emission area, the second emission area, and a third emission area.
