ABSTRACT

An organic molecule for application in optoelectronic devices is disclosed. The organic molecule has a structure of Formula I, wherein R^1 and R^2 are independently from each other selected from the group consisting of: C_1 - C_{40} -alkyl, which is optionally substituted with one or more substituents R^5 , and C_6 - C_{60} -aryl, which is optionally substituted with one or more substituents R^5 ; and R^H is selected from the group consisting of H, D, F, Br, I, and C_1 - C_4 -alkyl.

Formula I
