Implementations generally relate to fan emoji identifications. In some implementations, a method includes generating a primary emoji identifier (ID), wherein the primary emoji ID is digitally signed with a primary private encryption key, and wherein the primary emoji ID is associated with a primary user. The method further includes generating a splitter emoji, wherein the splitter emoji demarcates the primary emoji ID. The method further includes generating a secondary emoji identifier (ID), wherein secondary emoji ID is associated with a secondary user. The method further includes concatenating the primary emoji ID, the splitter emoji, and the secondary emoji ID, wherein the combination of the primary emoji ID and the secondary emoji ID provides an attestation of an affinity of the secondary user to the primary user.
