(57) **ABSTRACT**

An electronic device according to an embodiment of the disclosure may include: a housing; a waterproof member comprising a waterproof material disposed along a periphery of the housing on one surface of the housing; a window cover disposed to face the one surface of the housing; a display disposed between the window cover and the housing and including a bending part located at one end part of the electronic device; and a molding part extending along peripheries of the window cover and the display and disposed on one surface of the waterproof member, wherein at least a part of the molding part may be disposed in one direction toward an outside of the electronic device and in another direction opposite the one direction based on the bending part of the display.
