(57) **ABSTRACT**

Disclosed are a vibration panel, a manufacturing method and driving method therefor and a vibration apparatus. The vibration panel includes: a base substrate (1) having at least one vibration element (A), where at least one annular hollow pattern (11) is provided at a portion, corresponding to each vibration element (A), of the base substrate (1), an orthographic projection of the annular hollow pattern (11) corresponding to each vibration element (A) on the base substrate (1) is non-closed, and the annular hollow pattern (11) corresponding to each vibration element (A) has a different total area; and at least one driver (2) positioned on one side of the base substrate (1), each driver (2) being configured to drive at least one vibration element (A) to independently vibrate.
