ABSTRACT

According to an aspect of the present disclosure, a display device includes a display panel configured to display an image; a corrugated panel on a rear surface of the display panel, the corrugated panel comprising a first skin layer, a second skin layer, and a core layer between the first skin layer and the second skin layer; and a back cover that encloses the display panel and the corrugated panel, wherein at least one of the first skin layer or the second skin layer comprises an opening through a thickness of the at least one of the first skin layer or the second skin layer to improve the appearance quality of the display device.
