ABSTRACT

An organic light emitting diode and an organic light emitting display device including the same includes an anode, a cathode facing the anode, a first emitting part including a first emitting material layer and positioned between the anode and the cathode, and a second emitting part including a second emitting material layer and positioned between the anode and the first emitting part or between the cathode and the first emitting part, wherein the first emitting material layer includes a first emitting layer including a first fluorescent compound being a boron derivative and a second emitting layer including a second fluorescent compound being a boron derivative and positioned between the first emitting layer and the cathode, wherein the second emitting material layer includes a phosphorescent compound.
