(57) **ABSTRACT**

A heating element for an aerosol-generating device is provided, the heating element including: a first electrically resistive heating filament; and a support substrate on which the first electrically resistive heating filament is provided, the support substrate including a first carbon-fibre support layer comprising a carbon-fibre material. A method for forming a heating element for an aerosol-generating device is also provided. An aerosol-generating device including the heating element and a power source is also provided.
