**ABSTRACT**

According to one or more embodiments of the disclosure, a device may detect, from video data captured by one or more cameras, a plurality of participants in a video conference. The device may determine one or more physical characteristics of the plurality of participants. The device may identify one or more target participants from among the plurality of participants based on their one or more physical characteristics. The device may make an adjustment as to how the video conference is presented to the plurality of participants based on those one or more physical characteristics of the one or more target participants.
