(57) **ABSTRACT**

Summary

Retrofittable multifunctional display module, designed for retrofitting in doors, walls, cabinets, and its method for temperature control, characterized in that the internal temperature of the display module in the closed state is detected via the temperature sensors 7 and subsequently the fans are controlled as a function of the internal temperature of the display module and, depending on the internal temperature of the display module, modules are switched off and, in an overtemperature range of the internal temperature of the display module, the appliance is switched off completely.
