§ 371 (c)(1),

(2) Date: **Sep. 7, 2022**

The lighting module disclosed in the embodiment includes a circuit board; a plurality of first light emitting devices disposed on a first region of the circuit board; a plurality of second light emitting devices disposed on a second region of the circuit board; a resin layer including a first resin portion sealing the first light emitting devices and a second resin portion sealing the second light emitting devices; a phosphor portion disposed between the first and second resin portions; a diffusion layer disposed on the first resin portion; and a reflective layer disposed on an upper surface and an outer side surface of the second resin portion, wherein each of the first light emitting devices and the second light emitting devices has at least one row in a first direction, and are arranged in a second direction orthogonal to the first direction, and a width of the second resin portion in the first direction may be smaller than a width of the first resin portion.
