ABSTRACT
The present disclosure discloses a refrigeration system and a device provided with a refrigeration apparatus. The refrigeration system includes an enclosed space and at least one first heat generating device installed in the enclosed space. An end of the first heat generating device is connected to a drainage apparatus and two heat exchange apparatuses. The drainage apparatus absorbs hot air generated by the first heat generating device to form a hot air flow, and causes the hot air flow to flow through the heat exchange apparatus, such that the heat exchange apparatus carries out heat exchange to form a cold air flow and discharges the cold air flow into the enclosed space.
